GMZ400-141530-

Synopsis for Lower Atchafalaya River LA to High Island TX out 60 NM including Sabine and Calcasieu Lakes and Vermilion Bay
310 AM CST Thu Nov 14 2019

.SYNOPSIS...

Showers will continue through today as low pressure aloft advances eastward into the western Gulf of Mexico. This feature will be accompanied by a weak surface trof and a tightening pressure gradient resulting in a moderate offshore flow returning to the Gulf waters. This feature will be followed late by another cold frontal passage late in the day with rains tapering off as sharply drier air advects into the region. Northerly Winds will remain moderate in the wake of the front through Friday when high pressure builds over the region. Another area of low pressure and associated cold front will cross the area Sunday night with widely scattered showers accompanying it.
